

# Hexafly Insect Frass

Hexafly insect frass is a potent natural fertiliser suitable for use in agriculture and horticulture. It reduces the need to use chemicals that are detrimental to the environment.

This also lowers the costs associated with such substances, and promotes a healthy environment and ecosystem, all while providing excellent quality crops and yields.

Hexafrass is a natural bio control agent. It has been proven to make aphids infertile and strengthen crops immunity. This protects plants without damaging the local ecosystem including, animals, plants, land and waterways.

Hexafrass can also be used effectively as aquafeed where local regulations provide for this.

## Product Safety

Hexafly Insect Frass is in full compliance with all current regulations for natural fertilisers.

## Storage

Hexafly Insect Frass should be stored in a moisture free environment and away from direct sunlight. Hexafly Insect Frass has a shelf life of 12 months when stored in the correct conditions.

## Packaging

Available in bulk bags or 5L tubs for retail. Hexafrass is available milled or pelleted.

# Hexafly Insect Frass

## Analysis

Protein 20.5%

Fat 3%

Ash 5.5%

NPK 4:3:2

Hexafly insect frass analysis is consistent however regulations allow for variation +/-3%

Hexafly insect frass is a soil enhancer. Unlike traditional chemical fertilisers, we do not advise increased application over time. It is a natural product that will improve soil health and benefit crops without the negative effects caused by chemical fertilisers.

The beneficial properties in Hexafrass are soluble allowing for multiple applications.
